

CARE HOSPITAL HYDERABAD — DISCHARGE SUMMARY

Department of Internal Medicine

Patient:	Rahul Verma	MRD:	CRH-2026-4421
Age/Gender:	51 Yrs / Male	Admission:	29 April 2026
Ward:	General Medicine 4A	Discharge:	01 May 2026
Doctor:	Dr. Sunitha Rao	Days Stay:	2 Days

REASON FOR ADMISSION

Patient presented with extreme fatigue, unexplained weight gain (6 kg in 2 months), cold intolerance, puffiness of face, and constipation for 6 weeks. BP on admission: 162/100 mmHg. Admitted for workup.

DIAGNOSIS

#	Diagnosis	Type
1	Primary Hypothyroidism — Hashimoto's Thyroiditis	Primary
2	Hypertension Stage 2 (BP 162/100 on admission)	Secondary
3	Dyslipidaemia (Cholesterol 252 mg/dL)	Secondary

TREATMENT DURING ADMISSION

Medicine / Procedure	Dose	Route	Duration
IV Labetalol (BP control)	20mg bolus	IV	Day 1 emergency
Oral Amlodipine 10mg	Once daily	Oral	Day 2 onwards
Levothyroxine 75mcg	Once daily empty stomach	Oral	Day 2 onwards
ECG	Performed	Procedure	Day 1
Thyroid Ultrasound	Performed	Procedure	Day 2

INVESTIGATIONS DURING STAY

Test	Result	Interpretation
Thyroid Ultrasound	Heterogeneous echogenicity, reduced volume	Consistent with Hashimoto's Thyroiditis
ECG	Normal sinus rhythm, bradycardia HR 52 bpm	Hypothyroid-related bradycardia
Echo	EF 58%, No wall motion abnormality	Normal cardiac function
Serum Sodium	132 mEq/L (Low: 136–145)	Mild hyponatraemia — common in hypothyroid

CONDITION AT DISCHARGE

Stable. BP 144/90 on discharge. Fatigue slightly improved. Levothyroxine started. Patient counselled on medication compliance and dietary restrictions.
